

IAM Hands-On Lab Portfolio

Module M2 — Initial Configuration of Microsoft Entra ID

Mubashshir Athani • SC-300 Track • Free Entra ID tenant lab • Completed Sep 2026

About this lab

This document is hands-on evidence that I configured a Microsoft Entra ID tenant from scratch in a free lab environment — covering navigation, sign-in branding, least-privilege role assignment, and tenant-wide governance settings. **Lab tenant:** mubbolaboutlook.onmicrosoft.com • Test users: login1, login2, login3 • Role: Global Administrator (me).

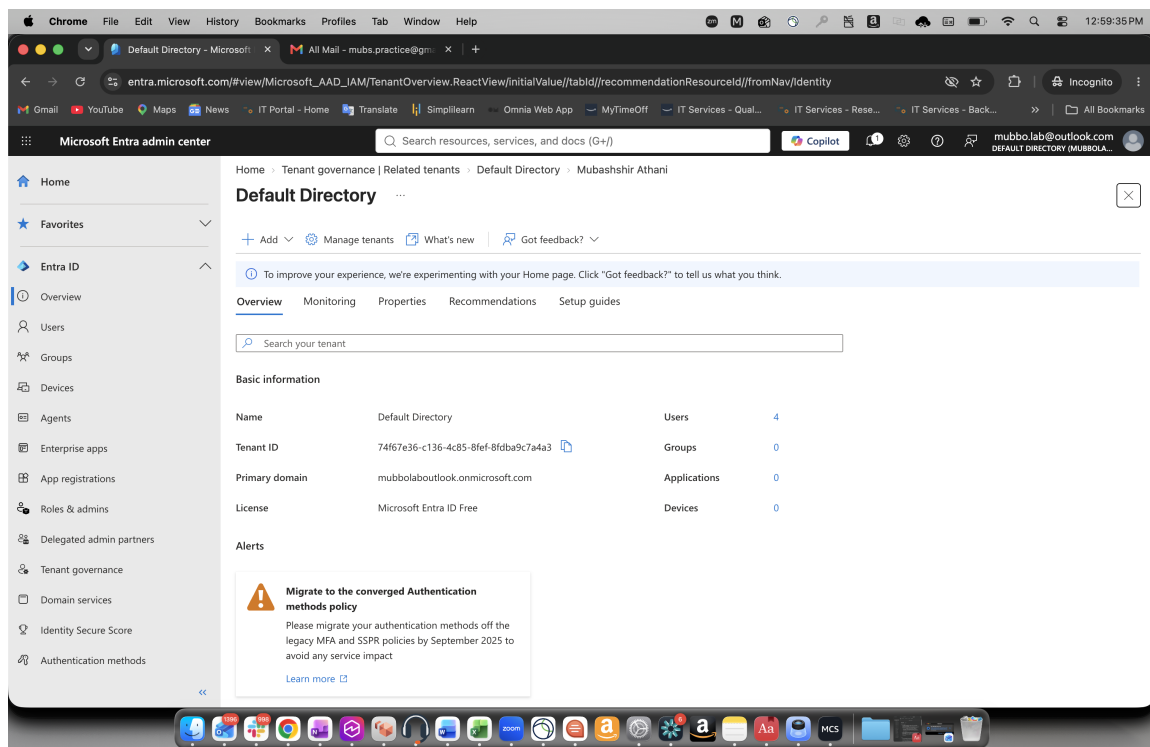

Task 1 — Explore the Entra admin center

What I did

Signed in to the Entra admin center and located the tenant Overview — confirmed the Tenant ID (74f67e36-c136-4c85-8fef-8fdb9c7a4a3), primary domain, license (Entra ID Free), and that all 4 users exist.

Why it matters

The Overview is an admin's home base — you confirm tenant identity, domain, and license state before making any change.

■ Tenant Overview — Tenant ID, primary domain, license, and 4 users.

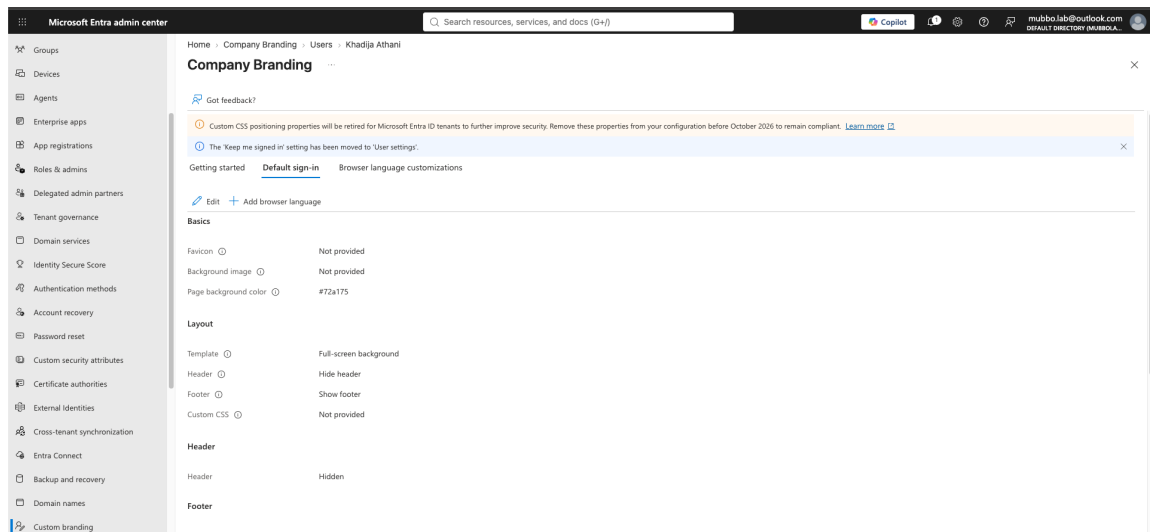

Task 2 — Configure Company Branding

What I did

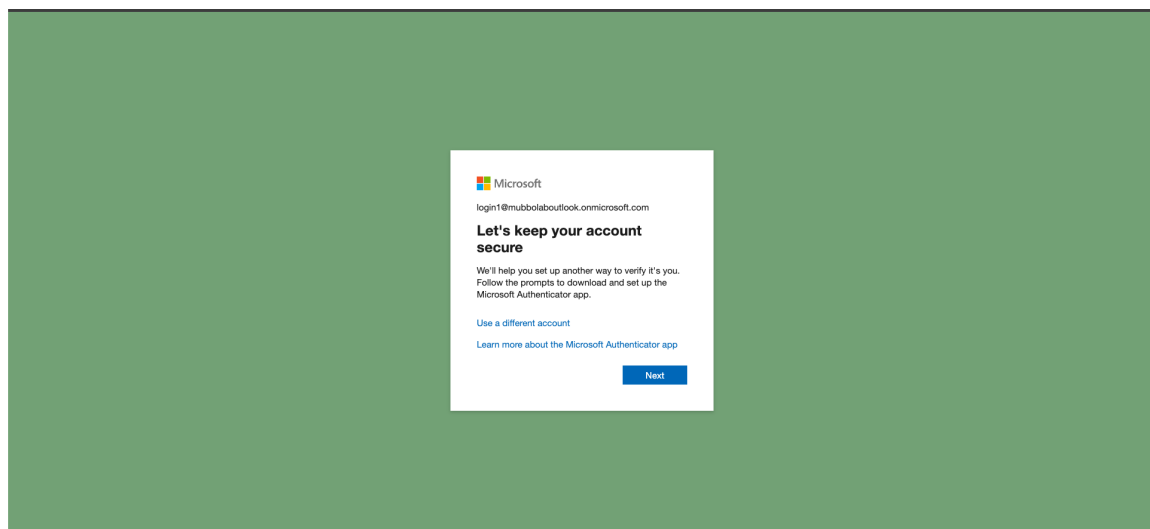

Customised the default sign-in experience — set a page background colour (#72a175 green) and a footer message “Mubashshir IT Security – Securing every dot”. Left all image fields empty (all optional).

Why it matters

Branding is a security control, not decoration: users who recognise their real sign-in page are far less likely to fall for phishing pages that lack it.

■ Company Branding config — background colour + footer text saved (images skipped).

■ Branding live — login1's sign-in page shows the custom green background.

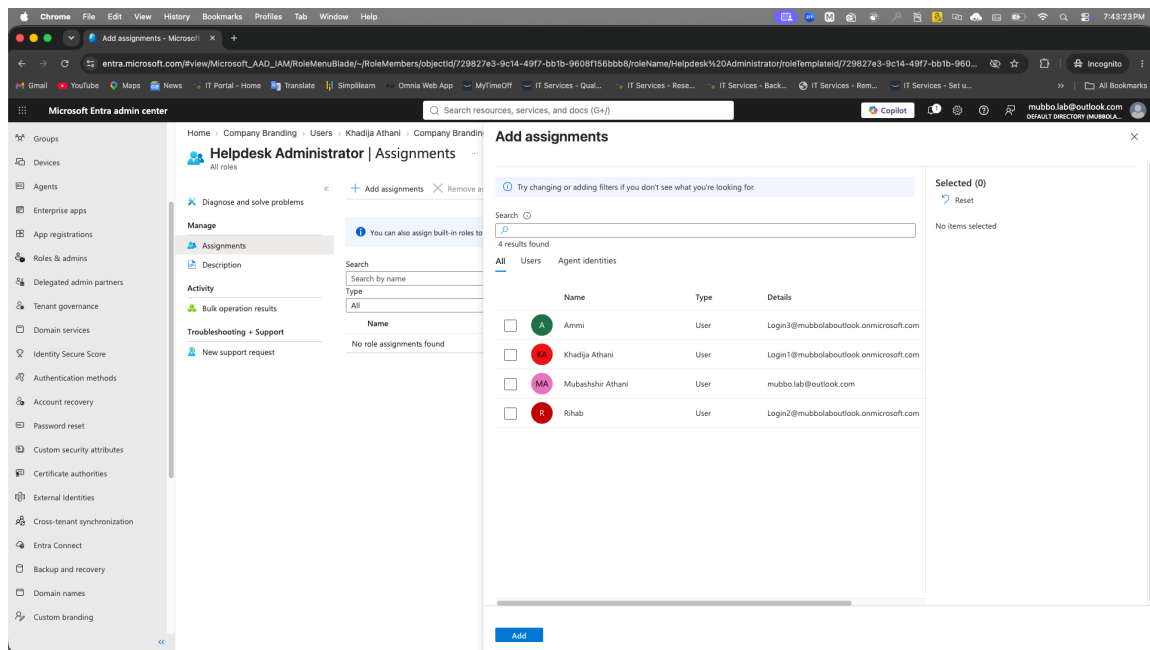

Task 3 — Assign an Admin Role (Least Privilege)

What I did

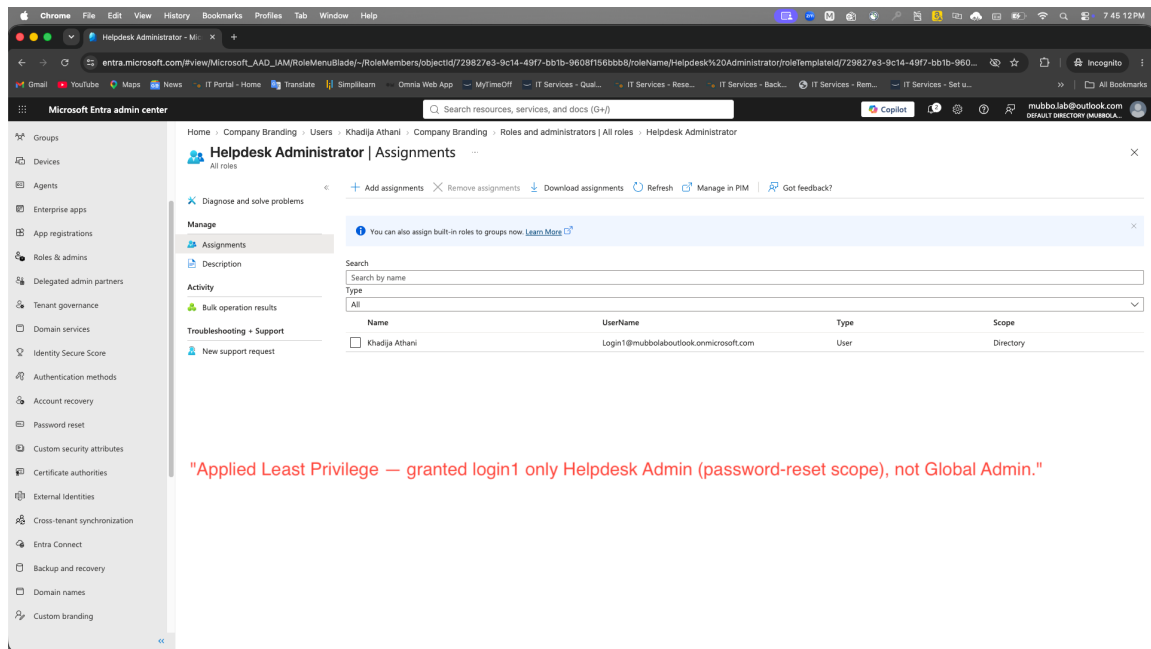

Assigned login1 (Khadija Athani) the Helpdesk Administrator role — a focused role limited to password resets for non-admin users — instead of Global Administrator.

Why it matters

This is Least Privilege in practice: grant the minimum role the job needs. If the account is compromised, the blast radius is tiny — no billing, no Conditional Access, no ability to create other admins.

■ Add assignments — selecting login1 for the Helpdesk Administrator role.

■ Least Privilege proof — login1 assigned Helpdesk Administrator (Directory scope), not Global Admin.

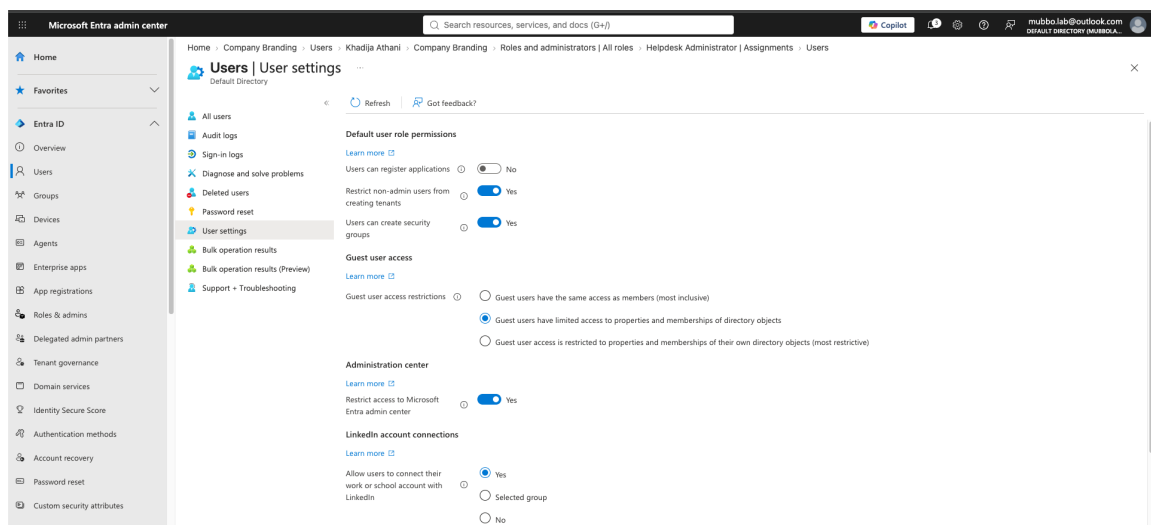

Task 4 — Harden Tenant-wide Settings

What I did

In User settings, set “Users can register applications” to No and “Restrict access to the Microsoft Entra admin center” to Yes. Reviewed guest-access restrictions (left at limited access).

Why it matters

These are tenant-wide governance defaults — they apply to everyone at once. Disabling self-service app registration reduces shadow-IT risk; restricting admin-center access keeps normal users out of the management portal.

■ User settings — app registration disabled and admin-center access restricted.

Skills demonstrated

Task	Skill proven
Explore admin center	Confident navigation of Microsoft Entra ID; reading tenant identity & license.
Company branding	Anti-phishing hardening of the sign-in experience.
Admin role assignment	Least Privilege — scoped role assignment over Global Admin.
Tenant-wide settings	Governance hardening — app registration & admin-center restrictions.

Part of my SC-300 (Microsoft Identity & Access Administrator) hands-on learning journey.
